DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 98-100 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 98-100, and 119 are rejected under 35 U.S.C. 102(a) and 102(e) as being anticipated by Reinchert et al. (U.S. Patent No. 6,193,779).

Reinchert et al disclose capacitor-grade powders such as tantalum comprising a plurality of tight agglomerations of primary particles, wherein the primary particles have particle size of 30 to 300 nm and wherein the secondary particles, i.e., tight agglomeration which are obtained by the sintering of the primary particles have a D50 size greater than 10 microns. See col. 3, lines 15-22 and Tables in Examples 6, 7 and 8.

Reinchert et al is silent about the mass percentage of the powder comprising tightly agglomerations, however since Reinchert teaches the powders consist of sintered primary

Application/Control Number: 09/973,624

Art Unit: 1793

particles (col. 3, lines 15-16), it means that substantially all of the powders are tightly agglomerations. The capacitor-grade powders of Reinchert would have more than 40% by mass of tightly agglomerated compositions, as recited in the claims 98 and 119.

As for claims 99 and 100, Reinchert teaches the powder having primary particle purity based on metal contaminant in the amounts as recited by the claims. See Tables in examples 5, 6, 7.

- 4. Claims 2-28, 55-70, 80-97, 102-118 are allowable.
- 5. Applicant's submission of an information disclosure statement under 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p) on 8/23/07 prompted the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 609.04(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
